(54) Title: INTEGRATED ANTENNA AND SPEAKER

(57) Abstract: A combined antenna and speaker for a radio receiving apparatus, such as a radio communication terminal (1), comprising a speaker and a low profile built-in radio antenna element. Said antenna element comprises a flat sheet (21) carrying a conductive antenna trace (22), and where an exciter (26) is connected to said sheet and devised to induce vibrations therein for generating sound. This integrates a flat panel speaker with the antenna element, which saves components and increases antenna performance.
